## Customer Notice

### Update on Uranium Issues at Well 10

Dear Pine Valley Mutual Water Company Customers,

We are pleased to inform you that we may have found a potential solution to the Uranium issue previously identified at Well 10. Our proposed plan involves blending the water from Well 10 with water from Well 1 to reduce uranium levels to meet safe drinking water standards.

We are currently collaborating closely with State Authorities and are conducting thorough testing to confirm that this blending process is effective. If testing verifies that the solution is successful, the State will issue a Return to Compliance (RTC) order.

As soon as we receive confirmation from the State and are officially returned to compliance, we will promptly notify all our customers. Thank you for your patience and continued trust as we work to ensure the safety and quality of your water.

Sincerely,

Pine Valley Mutual Water Company
